REVERSE — gravity reverses the sequence:
(5) The foundation of chemistry ->
(5) Chemistry / molecular bonds — reversed:
gravity breaks molecular and chemical bonds — complexity destroyed ->
(4)(Electromagnetism) — reversed:
increasing density/gravity destroys atoms — electrons are pushed out of their
shells into the nucleus, the reverse of photon-mediated bonding ->
Nucleon ->(Neutron, Proton) — electron-degenerate matter [white dwarf] ->
(3) Electron capture (the reverse of beta decay), via the (W boson):
Proton + electron -> Neutron
(up, up, down) -> (down, down, up)
the 15-minute unpaired window is not erased — it marks the same threshold that spans
the whole sequence from neutron star to magnetar, where magnetism
(3) dominates ->
Quarks (down, down, up): bound inside the neutron ->
(2) -Weak Force (Z Boson) / deconfinement:
quarks released from hadronic confinement -> quark-gluon plasma ->
(1) -(strong force) loses its binding power — releases the 99% of mass instead of
generating it ->
Higgs Boson: quarks lose the 1% mass, symmetry restored ->
....Higgs Field ($v \to 0$)
